The Plunger Cycle: The Basics

5

Copyright Extreme Telematics Corp
8/5/2020

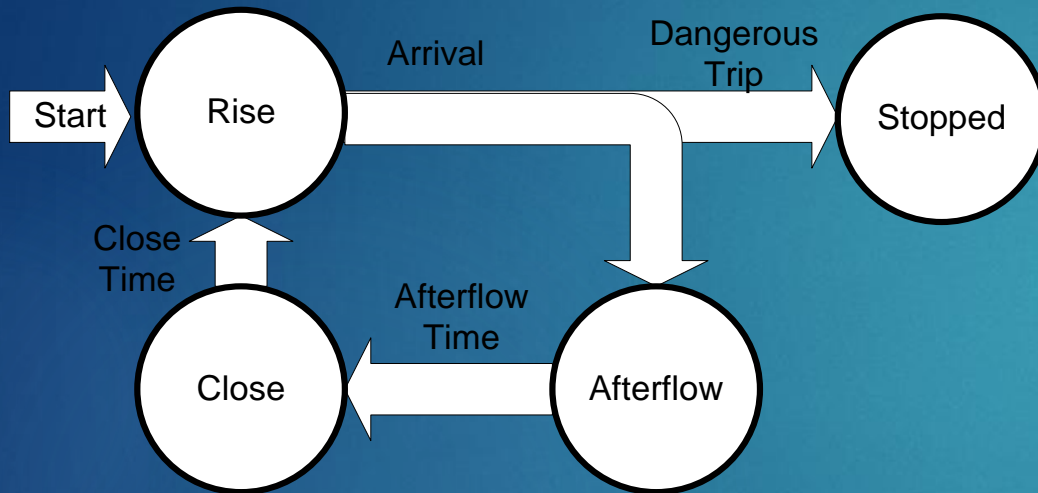

- ▶ Rise
 - ▶ Well is open, plunger rising
 - ▶ Start of a new cycle
 - ▶ Force by pressing open button
- ▶ Afterflow
 - ▶ The flow time after the plunger arrives
- ▶ Close
 - ▶ Allows plunger to fall
 - ▶ Includes pressure build

The Plunger Cycle: Stopped

6

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Single Dangerous Trip
 - ▶ > 640 m/min (2100 ft/min)
- ▶ Multiple Consecutive Fast Trips
 - ▶ > 315 m/min (1034 ft/min)
- ▶ Multiple Consecutive Non-Arrivals
 - ▶ < 150 m/min (492 ft/min)
- ▶ Low Battery
 - ▶ < 5.5 V
- ▶ Hold Open/Closed
 - ▶ Press and hold close or open for 3 seconds

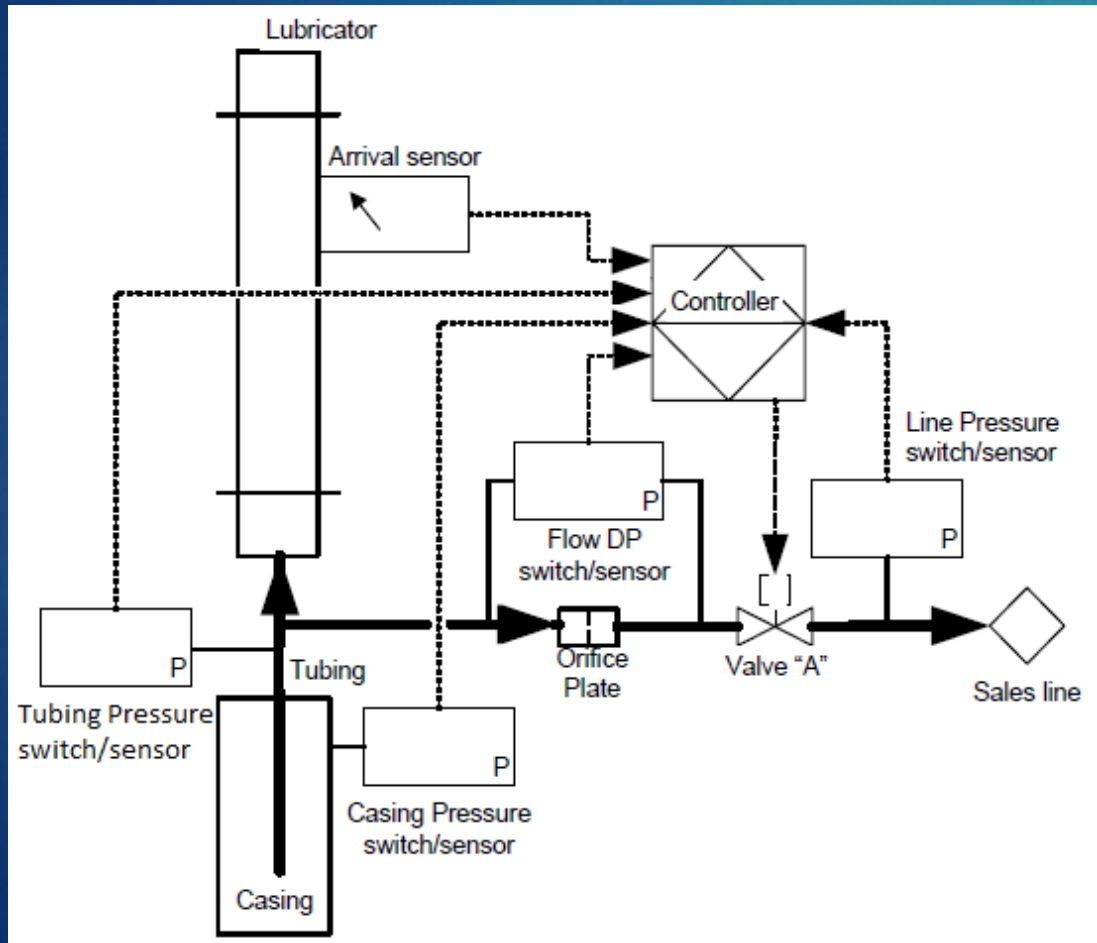

Model	ALiEn2 Lite	ALiEn2	ALiEn2 Expert
Operating Temp	0°F to +160°F	-40°F to +160°F	-40°F to +160°F
Valves Supported	1	2	3
Battery Standby Time	3+ Months	5+ Months	8+ Months
Arrival Sensors	Cyclops IS	Cyclops IS	Cyclops IS Sasquatch
Surface Velocity	N/A	N/A	Log Alarm
Other Inputs <i>Dry contact Switch or 0.5 – 4.5V sensor</i>	Line Pressure Tubing Pressure	Line Pressure Tubing Pressure	Line Pressure Tubing Pressure Casing Pressure Differential Pressure
Optimization	Upgrade to Adaptive Seeking Velocity Optimization Open on TP/DP	<i>Upgrade to Adaptive Seeking Velocity Optimization Open on TP/DP</i>	Adaptive Seeking Velocity Optimization Open on CP, TP, or CP – LP, Load Factor Close on CP, CP Rate of Change, DP, or Flow
Communications Interface	2 wire RS-485 Modbus Slave	2 wire RS-485 Modbus Slave	2 wire RS-485 Modbus Slave 2 wire RS-485 Modbus Master
Certification	UNCERTIFIED	Class I, Zone 0, Ex/AEx ia [ia] IIB Class I, Division 1, Groups C and D	Class I, Zone 0, Ex/AEx ia [ia] IIB Class I, Division 1, Groups C and D

Available Connections

8

- ▶ Standard
 - ▶ Plunger Arrival Sensor (PAS)
 - ▶ Line Pressure (LP)
- ▶ Expert Model
 - ▶ Casing Pressure (CP)
 - ▶ Tubing Pressure (TP)
 - ▶ Differential Pressure (DP)

Controller Wiring: Basics

9

- ▶ Battery
 - ▶ Plug this in before solar
 - ▶ Must use approved battery
- ▶ Solar
 - ▶ Must use approved 1.1W solar panel
- ▶ Sales Valve
 - ▶ Main production valve
- ▶ Valve B (Expert)
 - ▶ Used for flow to tank or flow tee
- ▶ Auto Catch (Expert)
 - ▶ Independent Auto Catch Control
 - ▶ Engage on arrival
 - ▶ Release after close

Copyright Extreme Telematics Corp

Controller Wiring: Inputs

10

- ▶ COM 1
 - ▶ Modbus Slave – SCADA System Connection
 - ▶ Firmware upgrade port
- ▶ PAS
 - ▶ 2 or 3 wire sensors supported
 - ▶ 3 wire delivers power to avoid battery replacements
 - ▶ Cyclops (3 Wire) recommended
- ▶ LP/TP and CP/DP (Expert)
 - ▶ 2 wire Murphy switch
 - ▶ 3 wire transducer delivers an actionable value
 - ▶ Pressure splitter available
- ▶ COM 2 (Expert)
 - ▶ Modbus Master – Interact with Sasquatch

The Plunger Cycle: Close -> Rise

11

Copyright Extreme Telematics Corp
8/5/2020

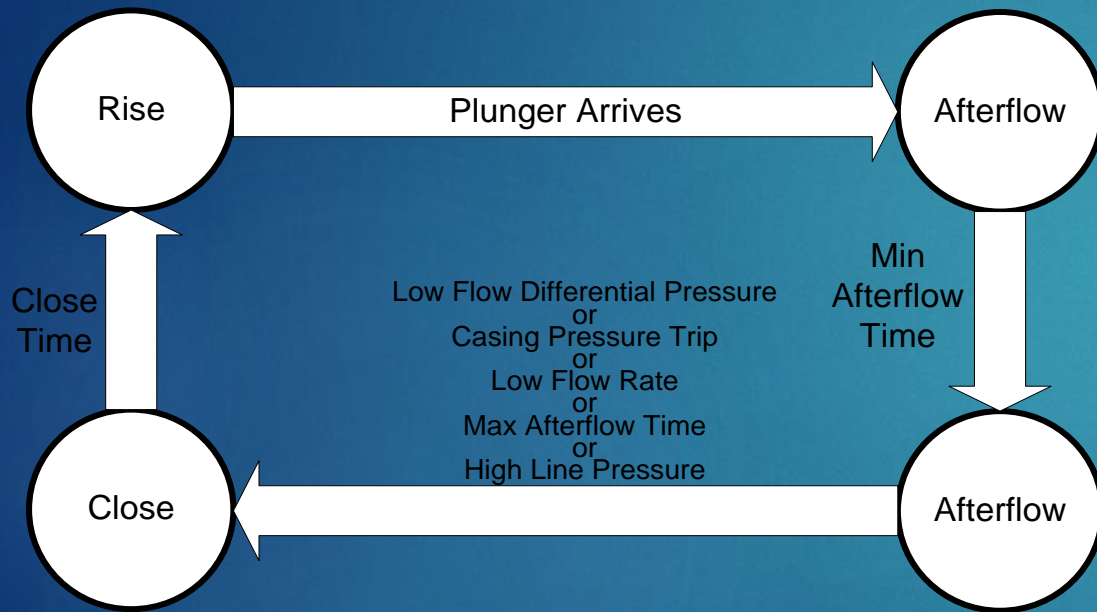

- ▶ Controller checks pressure conditions before opening the well
- ▶ Conditions to Open
 - ▶ Low Line Pressure
 - ▶ High Casing Pressure
 - ▶ High Casing – Line Pressure
 - ▶ High Tubing Pressure
 - ▶ Low Load Factor

The Plunger Cycle: Afterflow -> Close

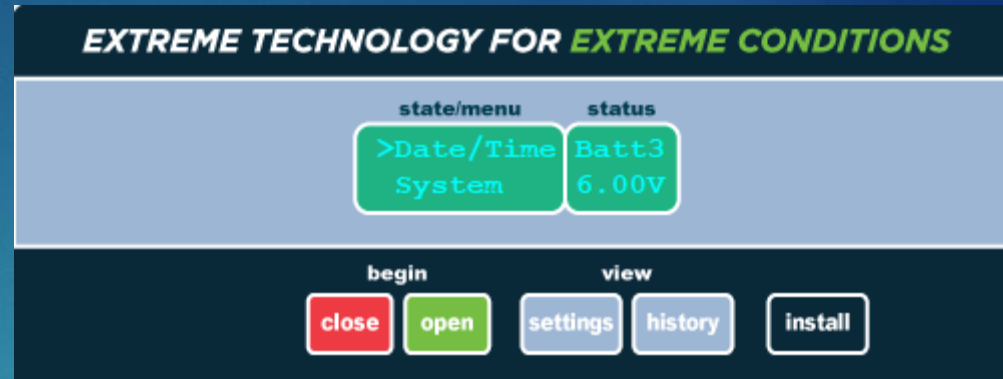

12

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Controller runs minimum afterflow time and then runs on pressure
- ▶ Conditions to Close
 - ▶ High Line Pressure
 - ▶ Low Casing Pressure
 - ▶ Low Casing Pressure Rate Drop
 - ▶ Low Differential Pressure
 - ▶ Low Flow Rate

Install>Date/Time

13

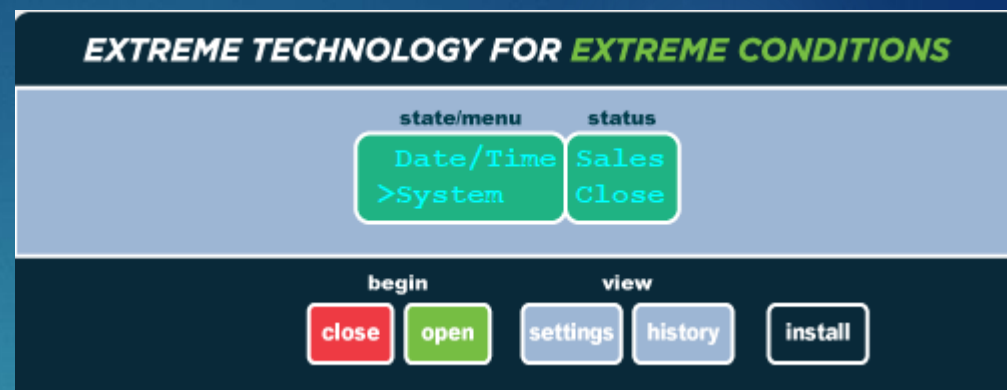

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Screens to set
 - ▶ Date
 - ▶ Time
 - ▶ Daylight Savings Time
- ▶ Time needs to be reset any time that power is lost
 - ▶ Battery disconnected

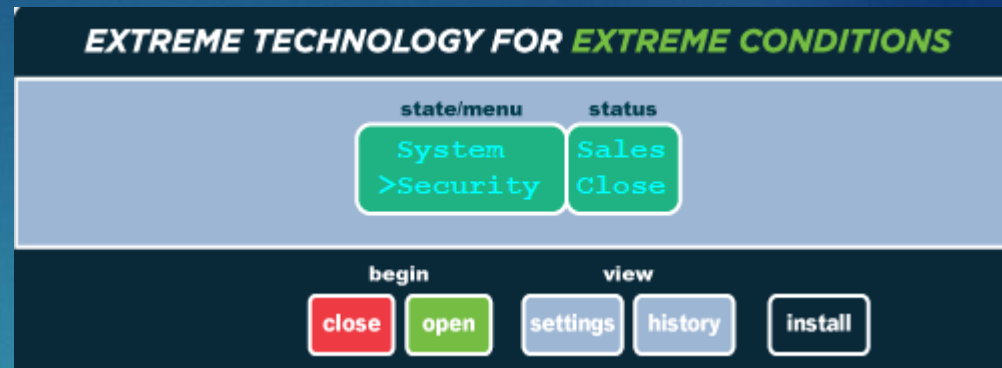

Install>System

- ▶ System level settings and info
- ▶ Display Brightness
- ▶ Auto Off
 - ▶ Screen Timeout
 - ▶ 30 second default
- ▶ Units – Imperial/Metric
- ▶ Serial Number
- ▶ Software Version
- ▶ Hardware Version
- ▶ Auto Logout
 - ▶ Goes back to main menu, logs out user
 - ▶ 10 min default
- ▶ Error Log

Install>Security

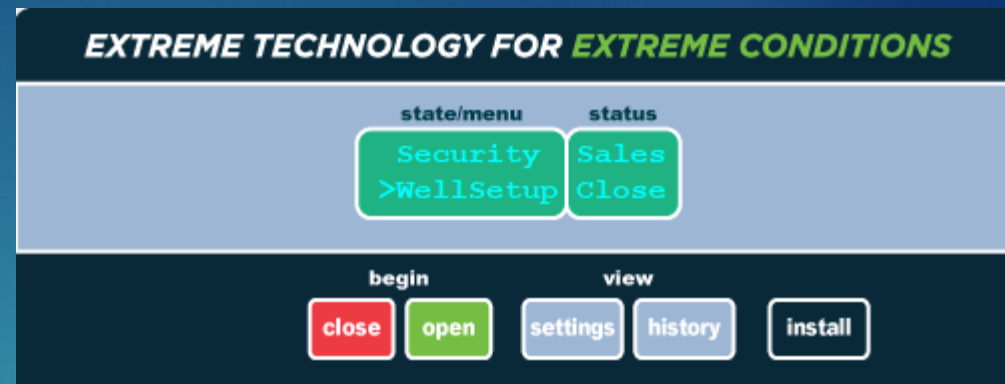

15

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Allows installer to turn on security to lock out install menu
- ▶ Disabled by default
- ▶ Operator ID and Installer ID
 - ▶ Default is 000-0000
- ▶ If you forget your ID, ETC can unlock
 - ▶ Need serial number

Install>Well Setup

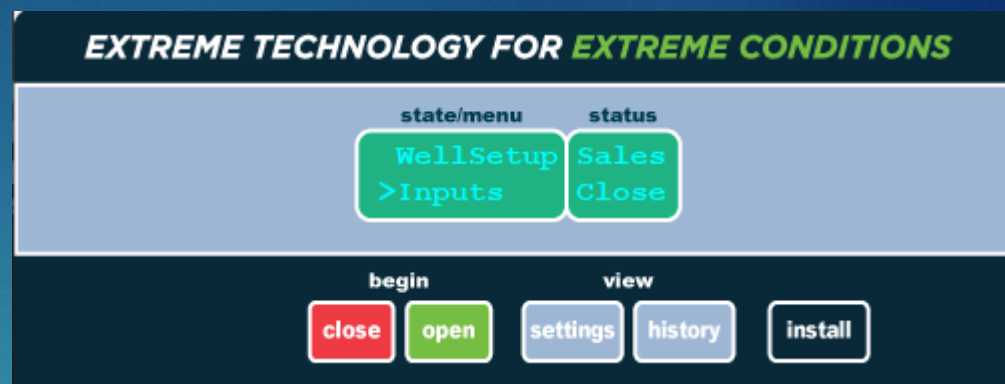

16

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Basic setup of times/velocities
- ▶ Time and velocity will calculate the other based on well depth
- ▶ Settings
 - ▶ Well Depth
 - ▶ Danger Time/Velocity
 - ▶ Fast Trip Time/Velocity
 - ▶ Rise Time/Velocity
 - ▶ Close Time/Velocity
 - ▶ Min/Max Close Time
 - ▶ Non-Arrival Close Time
 - ▶ Min/Max Afterflow Time
 - ▶ Afterflow Time

Install>Inputs

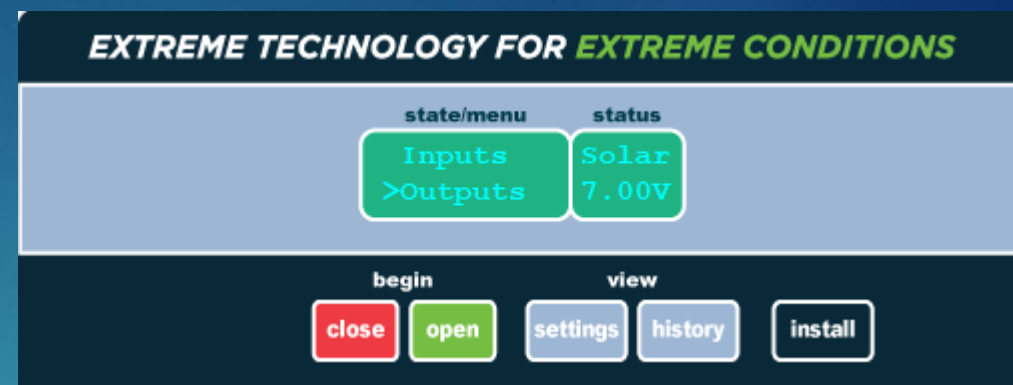

17

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Menu to turn on and configure inputs
- ▶ PAS
 - ▶ Enable
 - ▶ When to apply power
 - ▶ Delay – Required by some less reliable sensors
 - ▶ Switch polarity – Normally Open vs. Normally Closed
- ▶ Line/Casing/Tubing/Differential/Flow
 - ▶ Disabled/Switch/Sensor/Virtual
 - ▶ Switch Polarity
 - ▶ Range
- ▶ Device Logs
 - ▶ Keeps history of readings

Install>Outputs

18

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Valve status and configuration
- ▶ Valve B
 - ▶ Tank – Dump to tank if plunger does not arrive in Tank Delay Time
 - ▶ Line – Connected to sales line. Open or Closed during Afterflow
 - ▶ Purge – Inject gas at end of close
 - ▶ GAPL – Inject gas at end of close
 - ▶ Flow Control – Open during Rise, Closed during Afterflow
- ▶ Auto Catch
 - ▶ Engage On Rise or On Arrival
 - ▶ Hold Time
- ▶ LP-TP Select – Use valve to control pressure splitter
- ▶ Outputs
 - ▶ Configure pressure input PWR pin as an Output
 - ▶ On alarm or mimic valve

Install>Alarms

19

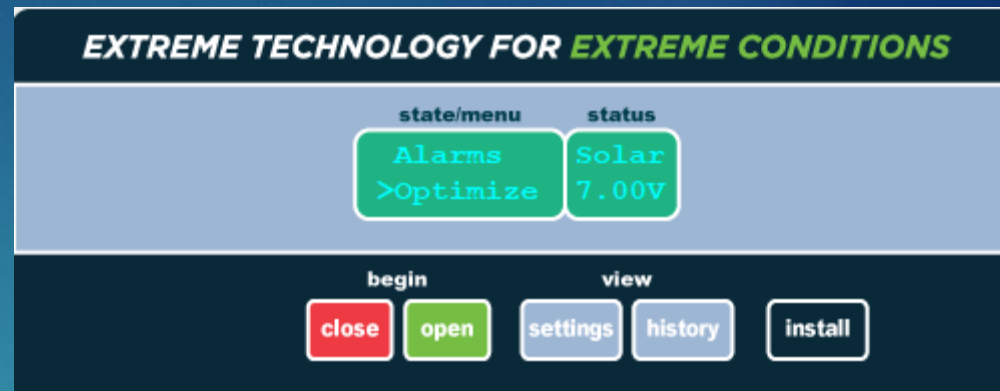

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Counts to send controller into alarm and what to do
- ▶ Pre Non-Arrival Count
 - ▶ # of missed arrivals before going to Non-Arrival
 - ▶ Non-arrival will run the Non-Arrival Close Time
- ▶ Non-Arrival Count
 - ▶ # of non-arrivals before stopping controller
- ▶ Fast Trip Count
 - ▶ # of fast trips before stopping controller
- ▶ Low Battery Fail/Fast Trip Fail/Non-Arrival Fail/Danger Fail
 - ▶ What action to take on a failure
 - ▶ Fail Open or Fail Closed

Install>Optimize

- ▶ Enable and setup optimization
- ▶ Optimization Type
 - ▶ Close (Oil)
 - ▶ Afterflow (Gas)
 - ▶ Close then Afterflow (Oil then Gas)
 - ▶ Pressure/Flow
- ▶ Adaptive Seeking Velocity Optimization
 - ▶ Proportional adjustments to Close and/or Afterflow
 - ▶ Based on Current Close/Afterflow
 - ▶ Scale Factor applied to dampen
- ▶ Pressure/Flow Optimization
 - ▶ Enable a given state for a specific device or device combination
 - ▶ Set stable time, trip, and reset

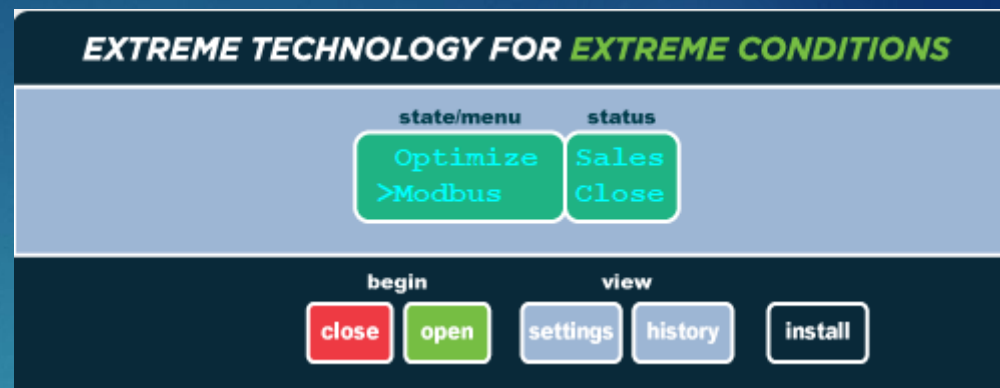

20

Copyright Extreme Telematics Corp
8/5/2020

Install>Modbus

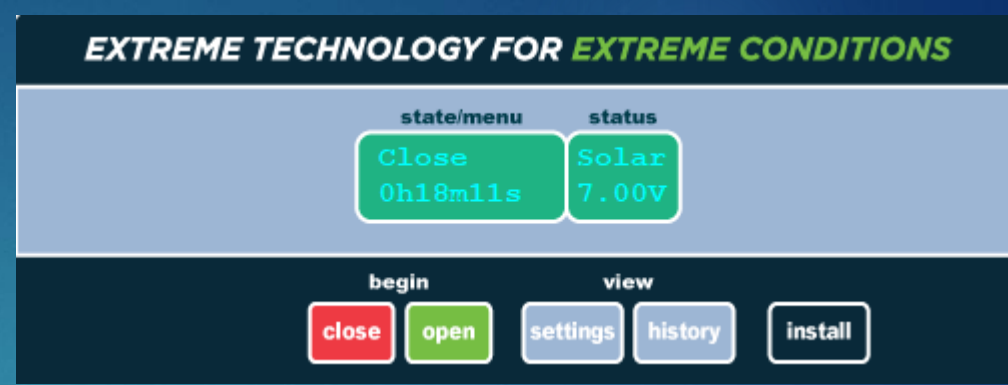

21

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Enable a Modbus Slave on COM 1 to connect to SCADA
- ▶ Disabled by default
- ▶ Ensure settings match Modbus Master
 - ▶ Station Address
 - ▶ Protocol (RTU/ASCII)
 - ▶ Baud Rate
 - ▶ Data Bits
 - ▶ Parity
 - ▶ Stop Bits
- ▶ Time Format
 - ▶ Sets Modbus registers as elapsed seconds since Jan 1, 2000 or H:M:S

Settings

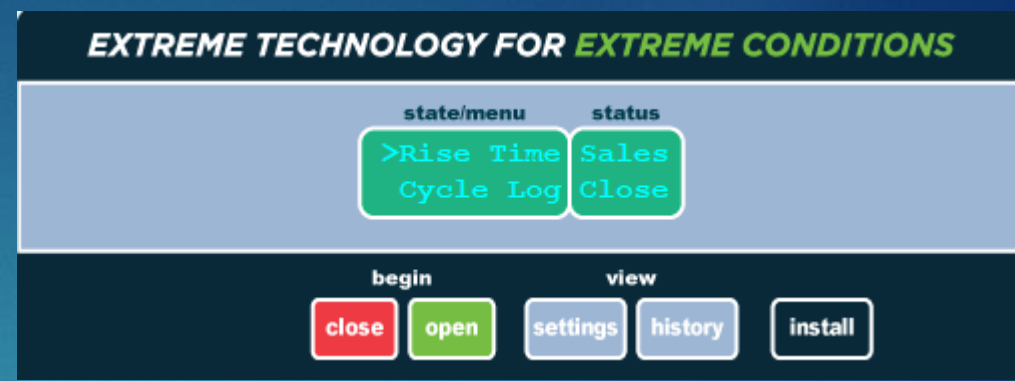

22

Copyright Extreme Telematics Corp
8/5/2020

- ▶ List of common settings for operators to access
 - ▶ Close Time
 - ▶ Non-Arrival Close Time
 - ▶ Rise Time
 - ▶ Fast Trip Time
 - ▶ Afterflow Time
- ▶ These settings are bound by Min and Max times in Well Setup

History: Cycle Log

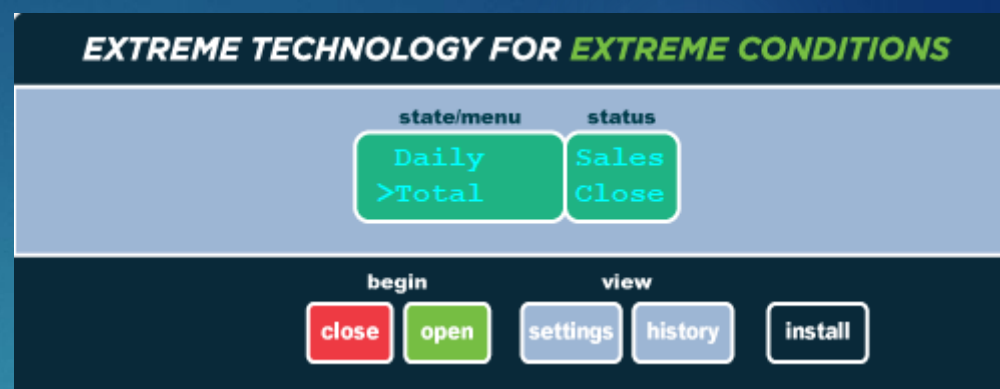

23

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Rise Time
 - ▶ Last 25 Rise Times
- ▶ Cycle Log
 - ▶ Last 25 Cycles
 - ▶ Date and Time
 - ▶ Rise, Afterflow, Vent, Close, Afterflow Casing Pressure

History: Total Logs

24

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Daily
 - ▶ Today + past 14 days
 - ▶ Date and Time
 - ▶ Number of Cycles, Open/Close Time, Vent Time, Volume, Cycle Type Count
 - ▶ Day Start Time – Gas day start/cut off
- ▶ Total
 - ▶ Same as Daily, but all time cumulative stats

History: Plunger Log

25

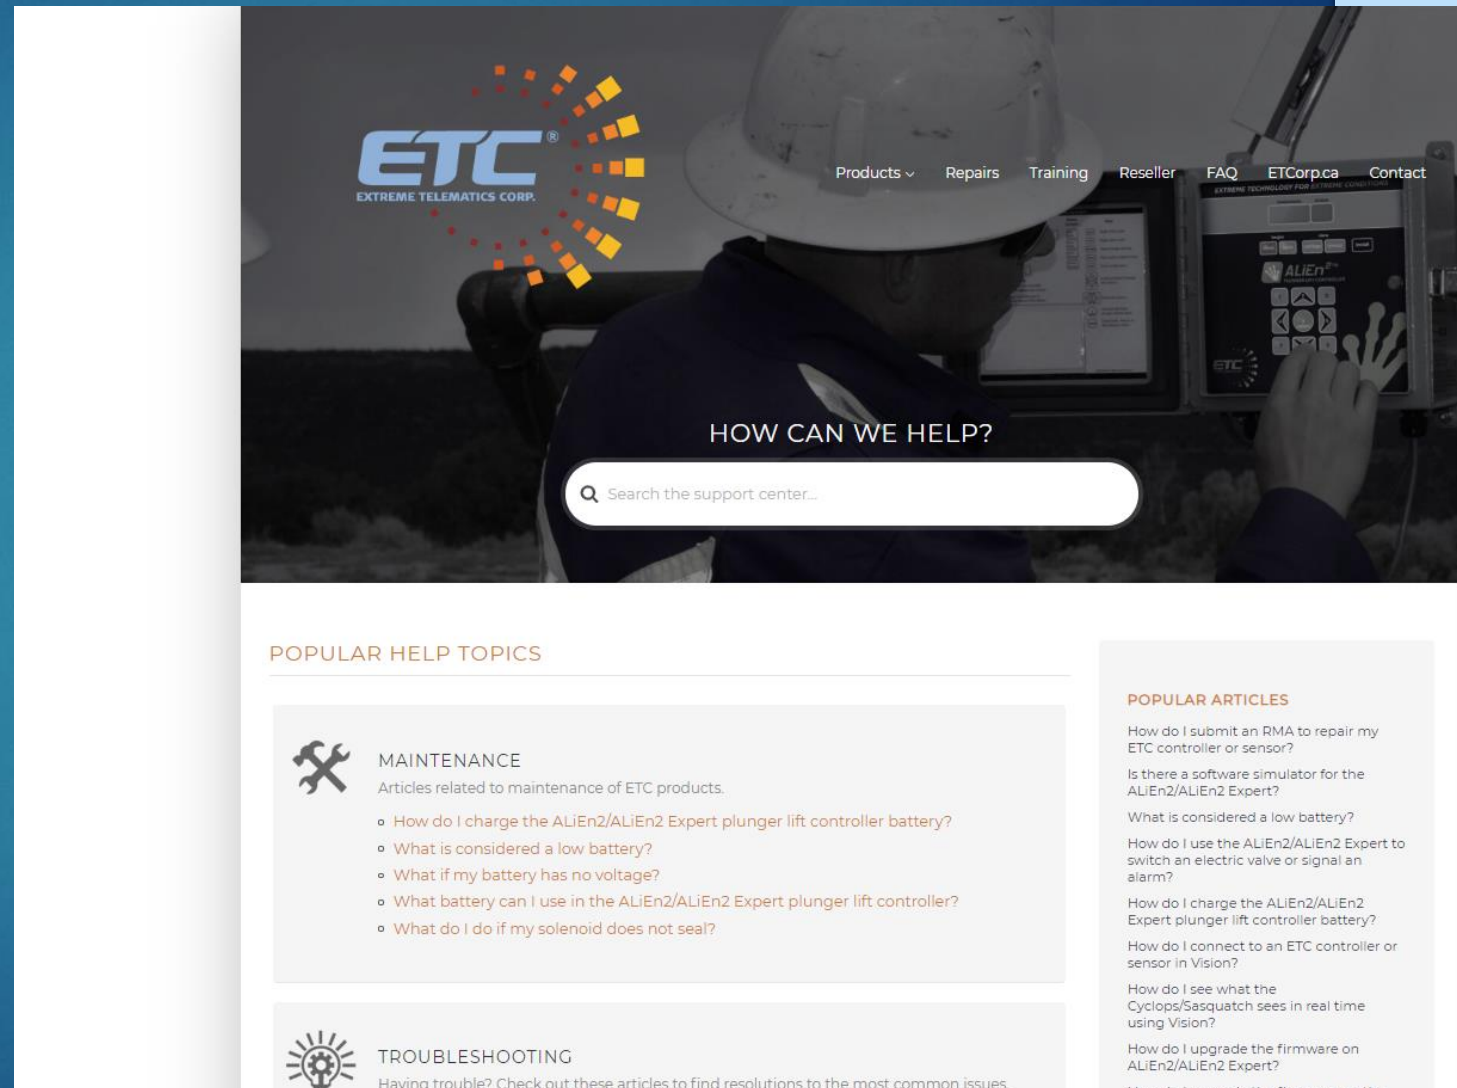

Copyright Extreme Telematics Corp
8/5/2020

- ▶ Distance travelled
 - ▶ 2 x Well Depth per run
- ▶ Arrivals
 - ▶ Number of recorded arrival events
